(54) Title: PROCESS FOR THE (CO-)POLYMERISATION OF OLEFINS IN THE GAS PHASE

(57) Abstract: Process for the polymerisation or copolymerisation in the gas phase of olefin(s) by bringing the said olefin(s) into contact, under polymerisation or copolymerisation conditions in a reactor in which the polymer or the copolymer is maintained in a fluidized bed and/or agitated with mechanical stirring, with a catalyst system, which process comprises a pre start-up operation characterized in that, prior to the introduction of the catalytic system in the reactor, the reactor is subjected to a cleaning treatment comprising the steps of introducing into the reactor an alkane having from 4 to 8 carbon atoms, circulating said alkane across the reactor under pressure and elevated temperature, depressurizing and purging the reactor.
